Commercial Vehicle JALTEST TPMS

The Jaltest TPMS device offers a comprehensive solution that mainly allows the reading, testing and programming of TPMS sensors, enabling a complete and reliable service or maintenance, improving vehicle safety and efficiency levels.

It is compatible with all types of OE sensors, alternative sensors and universal sensors, and it offers a wide coverage for a selection of vehicles.

SCAN CODE

Main functions

- Reading and testing of all TPMS sensors in commercial vehicles

Truck

Trailer

Bus

Light commercial vehicle

- Universal sensor programming

Alcar · BH Sens · Italmatic · Hamaton · Truck SM · Autel

More brands to consult

- ✓ Universal sensor cloning
- ✓ Writing of a new ID on universal sensors
- ✓ Compatible references for the different vehicles
- ✓ Consultation of work reports
- ✓ Information on sensor relearning processes in TPMS control units (Jaltest Diagnostics or similar tool required).

Test sensor

It allows the reading of IDs and sensor data (pressure, temperature, battery), after selecting the vehicle and the axle and tyre configuration.

Service TPMS

It provides information of interest on the compatible references for a selected vehicle and the necessary processes for relearning new sensors in the TPMS control unit. If cloning is not possible, a Jaltest Diagnostics tool or similar is required.

Program sensor

It allows you to create a new ID or copy the ID of another sensor, ensuring compatibility of any universal sensor with the selected vehicle.

Device with active software licence for one year from the distributor purchase. At the end of the license period (**50004023**), Jaltest TPMS will continue to work without restrictions and with identical features, but it will need to be updated to access coverage upgrades in new vehicles, brands and sensor models. Contact your distributor for more information related to the licence renewal.
